U.S. Patent Application No.09/977,089

Examiner Thomas J. Cleary

Art Unit: 2111

(from Brief Description of Arguments to be Presented) because in the MCF5206 interrupt priorities of external interrupts are programmable, it follows that MCF5206 discloses no mode in which interrupts (i.e., interrupt level and interrupt priorities) are fixed. For at least this reason, claims 1-7, 9-24, 26, 27, 29-32, and 40-43 are patentable over the applied art.

Moreover, the finality of the current Office Action is improper. That is, the current Office Action does not comply with the requirements for issuing a final Office Action in the first response to a Request for Continued Examination because the Amendment and Reply filed August 14, 2008, with the Request for Continued Examination would *not* have been properly finally rejected in the current Office Action had it been filed before filing the Request for Continued Examination. (See M.P.E.P. § 706.07(b).) The arguments included in the most recent Amendment and Reply successfully overcome the rejections made in the April 14, 2008, Office Action and in the current Office Action. Applicant's additional argument, presented above, is based on information available to the Examiner in MCF5206.
